sched_ext: current status and future plans

Friday 12 December 2025 15:00 (18 minutes)

This talk will kick off the sched_ext MC session with a brief overview of the project's current state: what features are available, what's missing and what remains under development.

We'll also look ahead to discuss gaps in the framework, ideas yet to be explored, and how we envision the sched_ext community growing.

The goal is to align contributors and spark discussions around priorities for the next development phase.
