Running PTP at scale:

Saturday 13 December 2025 13:00 (30 minutes)

The talk will give a short overview of changes of in-kernel interface to expose hardware timestamping capabilities and highlight the improvements done within the last several years. It will also focus on the typical problems found while running solutions with timestamping at scale - scalability and reliability issues. The talk will show most common anti-patterns in the drivers as well as best practices to use to avoid further issues.
